The full body dryer that will blow you away!

Turn on, step in and dry off

Haystack Dryers is the original body dryer manufacturer of purpose built body dryers. Our award winning Cyclone dryer, designed for drying up to five people at one time is a standard feature at Theme and Water Parks throughout Europe and the USA.

Over the past decade, our dryers have proved to be a firm favourite with operators and guests alike. The robust design ensures exceptional reliability and allows the dryer to be operated in all environments year on year. The benefits of installing Haystack Dryers include:

- Excellent additional revenue stream
- Enhanced customer experience
- Additional attraction
- ADA & DDA compliant
- Reduce carbon footprint
- Extend seasonal ride usage
- Flexible ownership options

Wet rides can be great fun with the unknown of how wet are you going to get! However, being wet and cold can quickly lead to a guest departing from a park or attraction. Haystack Dryers can provide the solution to this problem ensuring that guests are both warm and dry to enjoy their remaining time at the park. This continued enjoyment is vital to the secondary spend income stream.

How does it work?

The Cyclone dryer's unique air reclaim technology allows the unit to recycle up to 80% of the heated and clean air it expels, reducing energy consumption and increasing the efficiency of the unit.

The dryer draws air through its sterilised filter chamber before expelling the warm air in a drying vortex, a great attraction in itself.

After 3 ½ minutes or so of drying, the guests' will emerge dryer than when they entered and will have experienced the Cyclone Dryer Vortex.

Applications

- Water rides
- Water parks
- Resort hotels
- Splash parks
- Swimming pools

Operation

Dryers can be configured to operate on a variety of vending options:

- Hotel Key

NEW
for 2011

Service

All our dryers have the back up of an international team of installation and service engineers.

Patented Technology

Haystack offers the latest energy efficient and patented technology in our dryers to provide a sterilised continuous stream of warm air whatever the weather.

Warranty

All dryers are supplied with a comprehensive limited labour and parts warranty. See a representative for more details.

Control

The cycle time can be set to any length desired, usually 3½ minutes. Cycle charges can be set individually and configured to accept all local currencies.

Location

Dryers can be located indoors or outdoors on any level surface capable of supporting weight. You may also recess the dryer to create a level access entry point.

Theming

Haystack can offer the dryer cabinet and interior panels in all colours within the standard RAL colour palette. This extensive colour choice provides an opportunity to theme the dryer with the existing park or ride branding.

Cost Saving

In attractions where towels are supplied free of charge the introduction of dryers will not only offset these costs but also offer the opportunity to transform a cost centre into a profit stream.

Simple Installation

Our dryers have been designed specifically to address the requirements for both new and retro fit installations. The Cyclone dryer can be installed in one piece or dismantled for access.

Commitment

We are committed to ensure our products can be manufactured, transported, used and disposed of safely with minimal impact on our environment.

The ultimate drying machine is awaiting you.
